

1 Q. Further to V-NLH-111, Attachment 1: Please confirm that the reduced amount of
2 Specifically Assigned Operating and Maintenance costs will be reallocated among
3 customers as common cost, and provide a revised version of V-NLH-111,
4 Attachment 1 with revisions to calculations noted in IC-NLH-181, 182, 183 and 184
5 above, including total rate impact after reallocation of reduced amount of
6 Specifically Assigned Operating and Maintenance costs as common.

7
8
9 A. It is so confirmed. In the illustrative method provided in Hydro's response to V-
10 NLH-111, the reduced amount of Specifically Assigned Operating and Maintenance
11 costs will be reallocated among customers as a common cost. Because this method
12 was illustrative only and for discussion among parties, Hydro has not rerun its Cost
13 of Service methodology to reflect the reallocation of the increased common
14 transmission operating and maintenance costs. It would be onerous to modify
15 Hydro's models to reflect this change given that the amount is approximately
16 \$200,000 of additional common Operating and Maintenance costs.
