

1 Q. Further to CA-NLH-295: Please provide dollar and percentage impacts to each
2 customer class based on the 2015 COS assuming the CBPP Frequency Converter is
3 assigned (a) 50% common and 50% specifically assigned, and (b) 100% as common.

4

5

6 A. CBPP specifically assigned charges would change from the \$891,045 proposed in
7 Hydro's Amended Application to \$364,711 with a 50% assignment to common and
8 to \$0 with 100% of the frequency converter assets assigned to common.

9

10 The reduced specifically assigned charges under both scenarios would increase
11 common costs, of which approximately 90% would be recovered from
12 Newfoundland Power.
