

1 Q. Further to IC-NLH-189 above, please confirm that, effectively, Hydro is proposing
2 that any substandard work performed on the Frequency Converter, which resulted
3 in any required added capital spending by Hydro to address new issues from the
4 substandard work, will result in both the original capital project cost and the
5 secondary project capital spending (to rectify issues arising from the substandard
6 work) being charged directly to CBPP.

7
8
9 A. Hydro disagrees that the work completed was "substandard". Please refer to
10 Hydro's response to IC-NLH-189, in which Hydro stated the work completed on the
11 frequency converter was completed in accordance with Hydro's specifications.
12 Capital spending associated with the frequency converter is appropriately assigned
13 to CBPP.
