

1 Q. Re: Wilson Pre- Filed Testimony, page 17. Dr. Wilson indicates that  
2 industrials receive an "economic deterrent to reducing energy consumption"  
3 by way of the energy price signal.  
4

5 Please confirm that under Dr. Wilson's approach, an industrial  
6 customer would be able to implement CDM (e.g., energy  
7 conservation initiatives) and see energy cost benefits of 17.6  
8 cents/kW.h for each kW.h saved, without limit, and that these  
9 cost benefits would be enduring for the life of the efficiency  
10 initiative (and not be recalculated as a net lower rate to other  
11 customers as soon as the next GRA arrives). Absent this  
12 provision/protection, how are customers receiving a full  
13 pricing signal for the life cycle of their CDM investments?  
14
