

1 Q. **Re: IN-NLH-249, Att. 1**

2 The table presents revenue requirement impacts for the Labrador Interconnected
3 System, taking into account the suspension of work on the Labrador West
4 Transmission Line.

5 Please calculate these revenue requirement impacts, assuming that work on the
6 line is resumed this year.

7 Please also express these revenue requirement impacts as average rate impacts.

8

9

10 A. Hydro is unable to calculate the revenue requirement impacts of the Labrador West
11 Transmission Line capital spending. The initial estimates provided in Hydro's
12 response IN-NLH-249 are no longer relevant as the project is currently suspended
13 due to the uncertainty regarding financing of the Kami mine. If the work were to
14 resume this year, new annual cost estimates and an assumption regarding the in-
15 service date would be required in order to derive the rate base and revenue
16 requirement impacts.
