

1    Q.    **Re: IN-NLH-282**

2            What was the impact of Davis Inlet on the rural deficit, for each year from 1993-  
3            2007? Please detail this impact for each year expressed in 2015 dollars, and as a  
4            percentage of the total rural deficit in the Province.

6

7    A.    The cost of service study is required in order to calculate the rural deficit. Hydro  
8            completes a single Cost of Service study for the aggregate of all of the Labrador  
9            isolated systems and not a Cost of Service study for each system. This approach is in  
10           compliance with the Board's report concerning rural electrical service dated July 29,  
11           1996. Hydro does not compute the rural deficit by isolated system. Therefore, the  
12           information requested by isolated system is not available.
