

1 **Q. In Mr Brockman’s view, after the “Labrador Interconnection” is complete, will**
2 **power from Muskrat Falls be used to serve loads in Labrador? Please explain.**
3

4 A. Mr. Brockman does not have detailed knowledge of power flows in Labrador following
5 completion of the Muskrat Falls Development. However, it is likely that electric energy
6 from Muskrat Falls will flow to customers on the Labrador Interconnected System, at
7 least some of the time.
8

9 Mr. Brockman has not conducted a detailed review of the transmission arrangements and
10 contract agreements associated with the Labrador-Island Interconnection and the Muskrat
11 Falls Development. However, he is aware that there will be transmission lines
12 interconnecting Muskrat Falls to the Labrador Interconnected System and connecting
13 Labrador to the Island Interconnected System. The power flows resulting from these
14 interconnections, including the transmission of electrical energy from generating units at
15 Muskrat Falls to various loads will depend on the detailed characteristics of the electric
16 system. It is likely that some of the electrical energy produced at Muskrat Falls will flow
17 to customers in the nearby Town of Happy Valley-Goose Bay.
