

1 Q. Does NL Hydro anticipate utilizing any of the forecast available surplus capacity and
2 energy in the Labrador Interconnected System to support, directly or indirectly,
3 Nalcor's anticipated commitments to provide additional energy to Emera beyond
4 the NS Block and Supplemental Power as already committed in the Maritime Link
5 Agreement?

6

7

8 A. As has been the practice since 1998, Hydro will continue to sell surplus energy from
9 the Labrador Interconnected System to external markets. This energy will always
10 be fully recallable for use in Labrador if and when required. From time to time, this
11 energy may be used to support additional energy sales to Emera provided it is not
12 otherwise required for domestic use.
