

1 Q. Reference Dr. Wilson's evidence relating to Transmission Plant and Costs, on pages  
2 11-13.

3  
4 In recommending, on page 11, that there is a sound rationale for classifying network  
5 transmission lines on both demand and energy, does Mr. Wilson agree that there are  
6 a number of methodologies that cost of service experts have put forth that are also  
7 believed to be based on sound rationale?  
8  
9

10 A. It is true that there are various cost of service methodologies – some sound and some not  
11 sound. Any cost of service methodology that does not recognize the causal relationship  
12 between the cost of network transmission and energy requirements as well as capacity is  
13 not sound.
