

Undertaking 90

Re: Breakdown of what the vacancies were in each of these maintenance crews between 2009 and 2014.

Undertaking to see what the vacancy rates (in those particular departments for those years)

Please see Undertaking 90, Attachment 1.

Please note that the context of the undertaking was with regard to crews who perform maintenance work on terminal stations on the Island Interconnected System. This information was not readily available on a crew-by-crew basis; however, it is available for Hydro's Central Region (which comprises Whitbourne, Bishop's Falls and Stephenville crews) and Northern Region. Please see Undertaking 73 for the breakdown of the TRO regions, the terminal stations for which each crew is responsible, and the size of the crews.
