

1     Q.    Please update Table 5-1 of Attachment 1 of IC-NLH-16 to show the capability and  
2           LOLH limit/energy balance by year for the future planning period to 2031 under  
3           each of the Interconnected Island and Isolated Island scenarios.

4

5

6     A.    Please see Hydro's response to CA-NLH-022 for an updated table outlining the  
7           capability and LOLH limit/energy balance by year to the time of the Muskrat  
8           Falls/Labrador Island Link in-service. As indicated in this response, display of the  
9           data in this traditional format beyond 2017 is not appropriate due to the  
10          fundamental changes resulting from the Interconnection.

11

12       With final sanction of the project in December of 2012, the capability and LOLH  
13          limit/energy balance by year for the future planning period to 2031 under the  
14          Isolated Island scenario is no longer relevant.
