

1 Q. Further to response to Request for Information NP-NLH-009:  
2 Please detail all capacity additions to the Island Interconnected System since 2007  
3 and the cost of each addition. For each capacity addition, please explain if the  
4 generation addition or additional purchases was justified (i) to provide energy  
5 savings, or (ii) to meet Hydro's capacity criterion, or (iii) to meet Hydro's firm  
6 energy criterion.

7

8

9 A. Since 2007, there have been two capacity additions to the Island Interconnected  
10 System. These are the St. Lawrence Wind Farm (in-service 2008) and the Fermeuse  
11 Wind Farm (in-service 2009). Hydro purchases energy from both farms through  
12 PPAs and these purchases were justified as they provide savings in the cost of  
13 energy by replacing a portion of Hydro's existing generation with a more cost-  
14 effective source.

15

16 Please refer to Schedule VI of *Section 2: Regulated Activities* in *Volume I –*  
17 *Application and Evidence – Newfoundland and Labrador Hydro – 2013 General Rate*  
18 *Application* regarding the annual energy purchase costs for each project.
