

1    Q.    **2013 General Rate Application, Exploits Generation**

2            Pages 2.3-2.4 - The background to the arrangement related to Exploits Generation  
3            is described. Provide a summary of the principles governing the current supply of  
4            energy from Exploits Generation, including the length of the arrangement, the  
5            pricing and the terms of supply.

6  
7  
8    A.    The principles for the current supply are that Hydro will pay for all energy delivered  
9            to the Island Interconnected System from the Exploits facilities at 4 cents/kWh.  
10           This arrangement has been in place since the end of 2011 and it continues under  
11           the Order in Council directive (see PUB-NLH-002 Attachment 1).

12  
13           Hydro provides general direction on the dispatch of the Exploits facilities with a  
14           view to maximizing overall energy productions from all hydroelectric facilities over  
15           which Hydro has control. The economic dispatch of energy from the Exploits  
16           facilities is subject to similar logistical requirements and limitations as apply to  
17           Hydro's facilities. These include: the release of water for fisheries habitat reasons,  
18           the need to control water flows to protect downstream and spillway infrastructure,  
19           and the need to exert control on the level of water storage in Red Indian Lake when  
20           there is a flooding risk.
