

1 Q. Considering that the planned combustion turbine is to be available for the 2015-
2 2016 operating season, is there a point in time where delays in receiving
3 environmental approval or securing a supplier makes the project proposed in this
4 application no longer justifiable?

5

6

7 A. Environmental approval has been received for all of the different aspects of this
8 project (please see Hydro's response to NP-NLH-017) and the eight diesels are on-
9 site at Holyrood. Therefore, delays in receiving environmental approval or securing
10 a supplier are not applicable in considering whether or not this project is justifiable.
