

1    Q.    Reference: NP-NLH-4 from the RSP Application

2              Reference: IC-NLH-1 from the RSP Application

3              Vale has taken the position that a proper Interpretation of order in council OC

4              2013-89 is that the phase in of rates is to occur over a three year period and should

5              end on August 31, 2016 and not August 31, 2015. Assuming that the Board accepts

6              Vale's interpretation, please provide a month by month schedule showing the

7              forecast drawdown of the RSP credit for the island industrial customers for each of

8              Teck and Non-Teck industrial customers. This drawdown schedule will be for the

9              period January 1, 2014 until August 31, 2016 using an energy charge adjustment in

10             a manner consistent with historical disposition as described in NP-NLH-4 from the

11             RSP Application.
