

1    Q.    Please indicate the expenses that Hydro will incur in its 2014 net income to pay for  
2       the RSP interest related to each of the balances being carried (i.e. (a) hydraulic,  
3       under both the base case forecast and under the proposed application by Hydro; (b)  
4       industrial RSP surplus, under both the base case forecast and under the proposed  
5       application by Hydro; (c) utility RSP surplus; and, (d) Segregated Load Balance).

6

7

8    A.    The 2014 forecast net income impact of financing the noted balances in the RSP  
9       would be the difference between the Weighted Average Cost of Capital (WACC) and  
10      the short-term cost of borrowing as shown in the table below.

11

12      **2014 Estimated Net Income effect of RSP Financing**

(\$000s)	Base Case			Proposed <sup>1</sup>		
	RSP Interest <sup>2</sup>	Short-term Financing <sup>3</sup>	Net Income Impact <sup>4</sup>	RSP Interest <sup>2</sup>	Short-term Financing <sup>3</sup>	Net Income Impact <sup>4</sup>
Hydraulic <sup>5</sup>	4,599.5	638.0	3,961.5	4,599.5	638.0	3,961.5
Industrial RSP Surplus <sup>6</sup>	793.8	110.1	683.6	563.0	78.1	484.9
Utility RSP Surplus	8,683.2	1,170.2	7,512.9	8,683.2	1,170.2	7,512.9
Segregated Load Balance	1,409.4	191.0	1,218.5	1,409.4	191.0	1,218.5
<b>Total</b>	<b>15,485.9</b>	<b>2,109.3</b>	<b>13,376.5</b>	<b>15,255.1</b>	<b>2,077.3</b>	<b>13,177.8</b>

1 Proposed case reflects Second Interim Rates Application.

2 Financing in the RSP is based upon 2007 Test Year Weighted Average Cost of Capital (WACC) of 7.529% per annum.

3 Estimated short-term borrowing rate of 1.01% per annum.

4 A positive impact results in a reduction to net income.

5 Proposal is to transfer \$29.4 million at December 31, 2014 therefore there is no difference in financing costs.

6 Base Case assumes no drawdown of IC RSP Surplus other than Teck RSP adj rate of (11.11) mills/kWh.
