6 A. Hydro had been investigating available combustion turbine opportunities in the
7 market place since 2012. In April 2014, Hydro issued a public tender for a 100MW
8 (nominal) combustion turbine to be executed as an EPC (Turnkey) Contract. After
9 receipt of bids and prior to award of the contract, an independent engineering firm
10 was engaged by Hydro to inspect the stored condition of the unit ultimately
11 purchased. This inspection took place between April 28 and May 1, 2014. Refer to
12 Hydro's response to GT-DD-NLH-002 in its Application, *Supply & Install of 100MW*
13 *Combustion Turbine Generator* for a copy of the inspection report. During the week
14 of April 28, 2014, Hydro representatives (a General Manager from Regulated
15 Operations and other Project Execution and Technical Services engineers) also
16 visited the unit in the storage location to confirm condition. They also toured the
17 ProEnergy Facilities. Names of individuals are not required for the Board or the
18 Intervenors to gain an understanding of the matter before the Board, and it would
19 be inappropriate to file personal identifying information.
