

1 Q. Reference: Hydro's Reply, page 30, lines 1-8 regarding common mode failure. At
2 15:38 on January 4, 2014, a number of lines were tripped, including TL242. The
3 latter, and hence station service, was restored at 16:09. Does Hydro believe this
4 scenario qualifies as isolation of Holyrood Plant from the system and a loss of offsite
5 power event?
