

IN THE MATTER OF the
Public Utilities Act, RSNL 1990,
Chapter P-47 (the *Act*) as amended; and

IN THE MATTER OF a general rate
Application (the "Application")
by Newfoundland Power Inc.
("Newfoundland Power") to establish
Customer electricity rates for 2013 and 2014.

**Requests for Information by
The Consumer Advocate**

CA-PUB-01 to CA-PUB-61

December 5, 2012

1 CA-PUB-01 Reference Return on Equity, page 2 the paragraph is prefaced by the
2 statement "based on our research" and further on pages 43-44 "in
3 completing this assignment we reviewed and relied upon the following
4 information, documents and data.": Since the documents relied on
5 include expert reports prepared by Dr. Booth, Dr. Vander Weide and Ms.
6 McShane is it correct to say that the Grant Thornton (GT) report is not an
7 expert report itself but a synthesis and interpretation of the original expert
8 reports? If not please explain in detail why not.
9

10 CA-PUB-02 Reference Return on Equity, page 2 the paragraph is prefaced by the
11 statement "based on our research" and further on pages 43-44 "in
12 completing this assignment we reviewed and relied upon the following
13 information, documents and data.": Please indicate what original
14 research GT undertook in this assignment, since the references on pages
15 43-44 list no primary sources.
16

17 CA-PUB-03 Reference Return on Equity, page 2 the paragraph is prefaced by the
18 statement "based on our research" and further on pages 43-44 "in
19 completing this assignment we reviewed and relied upon the following

1 information, documents and data.”: Please indicate whether Mr.
2 MacDonald has undertaken any academic study beyond the B.Comm and
3 whether he has ever been qualified as an expert financial witness in
4 terms of cost of capital and if so indicated where, on what basis and
5 provide copies of that testimony.
6
7

8 CA-PUB-04 Reference: the fair return standard on page 6: Can Mr. MacDonald
9 confirm that the legal standard for a fair return in Canada as defined by
10 Mr. Justice Lamont and adopted by the Supreme Court of Canada is as
11 follows:
12

13 "that the company will be allowed as large a return on the capital
14 invested in the enterprise as it would receive if it were investing
15 the same amount in other securities possessing an attractiveness,
16 stability and certainty equal to that of the company's enterprise."
17

18 CA-PUB-05 Reference: the fair return standard on page 6: Can Mr. MacDonald
19 confirm that this definition arose out of changed conditions in the money
20 market and specifically refers to a risk adjusted return available on other
21 securities, that is, it is an opportunity cost based on market rates? If not
22 please explain why not.
23

24 CA-PUB-06 Reference: the fair return standard on page 6: In terms of the impact of
25 debt on the cost of equity, would Mr. MacDonald agree that if through the
26 use of deferral accounts there is minimal variability in the earned ROE
27 then by definition the use of debt is not magnifying equity returns? If not
28 please explain why not?
29

30 CA-PUB-07 Reference: the fair return standard on page 6: Did Mr. MacDonald
31 review the ability of NP to earn its allowed ROE as a factor in determining
32 whether debt magnified returns to the common shareholder in NP?
33

1 CA-PUB-08 Reference Allowed ROEs and common equity ratios, pages 9 and 10:
2 Please provide the allowed ROEs for Enbridge Gas Distribution Inc., and
3 Union Gas for 2010, 2011 and 2012.
4

5 CA-PUB-09 Reference Allowed ROEs and common equity ratios, pages 9 and 10:
6 Please provide the benchmark ROE as calculated by the New Brunswick
7 Public Utilities Board (November 30, 2010).
8

9 CA-PUB-10 Reference Allowed ROEs and common equity ratios, pages 9 and 10:
10 Please confirm that the Regie regards Gaz Metro as above average risk
11 and indicate the benchmark ROE as calculated by the Regie for 2010,
12 2011 and 2012 by subtracting out the Gaz Metro additional risk premium.
13

14 CA-PUB-11 Reference Allowed ROEs and common equity ratios, pages 9 and 10:
15 Please confirm that Maritime Electric is legislated to maintain a 40%
16 common equity ratio, which is why IRAC does not deem one.
17

18 CA-PUB-12 Reference Allowed ROEs and common equity ratios, pages 9 and 10:
19 Please confirm that although the NEB allowed TQM an ATWACC it also
20 indicated it was equivalent to a 9.7% ROE on 40% common equity and
21 subsequently all the mainline gas pipelines have negotiated the same
22 9.7% ROE on 40% common equity, for example Westcoast Transmission,
23 Foothills, NGTL etc.
24

25 CA-PUB-13 Reference Allowed ROEs and common equity ratios, pages 9 and 10:
26 Please confirm that Hydro One, although 100% owned by the Province of
27 Ontario is now an OBCA company.
28

29 CA-PUB-14 Reference page 12: automatic ROE adjustment formula and the
30 statement that Newfoundland has the "highest" adjustment coefficient:
31 Please confirm that when the Manitoba PUB introduced one of the first
32 AAM for Centra Manitoba it also used a 0.80 adjustment coefficient to
33 forecast changes in long Canada yields.
34

1 CA-PUB-15 Reference page 12: automatic ROE adjustment formula and the
2 statement that Newfoundland has the "highest" adjustment coefficient:
3 Please confirm that when the BCUC first introduced its AAM in 1994 it
4 used a 100% adjustment to forecast changes in long Canada yields.
5

6 CA-PUB-16 Reference pages 13-21: Risk profile and capital structure: Mr.
7 MacDonald concludes (page 21) that NP is an average risk Canadian
8 utility. Please indicate the basis for this conclusion given that there is no
9 discussion of other "comparable" Canadian utilities.
10

11 CA-PUB-17 Reference pages 13-21: Risk profile and capital structure: Please
12 confirm that although NP is regarded as an average risk utility, it has the
13 highest common equity ratio of any electric utility in Canada and if this
14 lowers its risk, it should have the lowest allowed ROE. If not why not.
15

16 CA-PUB-18 Reference pages 13-21: Risk profile and capital structure: Please
17 indicate how much the extra 5% common equity in NP's capital structure
18 is worth in terms of a lower ROE should the Board agree that NP is an
19 average risk Canadian utility.
20

21 CA-PUB-19 Reference pages 13-21: Risk profile and capital structure: Please
22 confirm that for 2012 Newfoundland has the 3rd highest forecast
23 economic growth rate after Alberta and Saskatchewan.
24

25 CA-PUB-20 Reference pages 13-21: Risk profile and capital structure: Please
26 indicate why a stable or slow growing utility is risky? Wouldn't the
27 absence of any changes indicate lower risk, that is, isn't change itself a
28 source of risk?
29

30 CA-PUB-21 Reference pages 18-21: credit metrics: Mr. MacDonald references
31 comparisons with Canadian utilities but actually makes none. Please
32 provide the DBRS bond ratings for Maritime Electric, Nova Scotia Power
33 and FortisBC Inc.
34

1 CA-PUB-22 Reference pages 18-21: credit metrics: Please provide a copy of the
2 DBRS document referred to on page 18.
3
4 CA-PUB-23 Reference pages 18-21: credit metrics: Please confirm that no rating
5 agencies puts the majority of its weight on financial metrics such as those
6 discussed on these pages, where Moody's specifically places only 40%
7 weight on them.
8
9 CA-PUB-24 Reference pages 22-25: financial and capital market conditions: Why did
10 Mr. MacDonald start the discussion in 2010 when that was the first
11 recovery year from the financial crisis and recession?
12
13 CA-PUB-25 Reference pages 22-25: financial and capital market conditions: Is Mr.
14 Macdonald aware of the state of capital inflows into Canada as one of the
15 few AAA rated countries left now that both France and the US have been
16 downgraded by S&P? Would Mr. MacDonald agree that higher bond
17 prices and lower yields can be a function of the decreased supply of AAA
18 government debt as well as increased demand?
19
20 CA-PUB-26 Reference pages 22-25: financial and capital market conditions: Can Mr.
21 MacDonald indicate a period when the Canadian economy has not faced
22 relatively high risk?
23
24 CA-PUB-27 Reference pages 26-33: Risk Premiums: Please indicate the date of the
25 Black, Jensen and Scholes paper referenced in footnote 54 and the time
26 period over which they estimated the CAPM to come up with their results.
27
28 CA-PUB-28 Reference pages 26-33: Risk Premiums: Please confirm that the BJS
29 research used a short term treasury bill yield as the risk free rate and
30 used the actual beta coefficient.
31
32 CA-PUB-29 Reference pages 26-33: Risk Premiums: Please confirm that Mr.
33 MacDonald's views on the CAPM are based on one (US based) paper
34 that is now exactly 40 years old.

1
2 CA-PUB-30 Reference pages 26-33: Risk Premiums: Please confirm that Mr.
3 MacDonald is using Blume adjusted betas in his CAPM estimates and
4 whether he is aware that these have been rejected by almost every board
5 in Canada. If not please provide citations to boards that have explicitly
6 accepted a beta adjustment toward 1.0.
7

8 CA-PUB-31 Reference pages 26-33: Risk Premiums: Is Mr. MacDonald aware of the
9 paper by Gombola and Kahl, "Time series properties of utility Betas,"
10 Financial Management, 1990 that indicates that utility betas revert to their
11 grand mean and not the grand mean of the market, ie., 1.0. If he is so
12 aware why would he use a general adjustment like Blume's instead of a
13 specific adjustment relevant for utilities? If he was not so aware, it is
14 referenced in footnote 6 to Dr. Booth's Appendix C to his evidence that
15 Mr. MacDonald references as material he has relied on.
16

17 CA-PUB-32 Reference pages 26-33: Risk Premiums: On page 33 Mr. MacDonald
18 indicates that the CAPM estimate of 6.84% is "below what we believe is a
19 fair ROE for the company." Does this mean that he entered into the
20 research with a preconceived notion of what the fair ROE for NP is? If
21 not what does this mean?
22

23 CA-PUB-33 Reference pages 26-33: Risk Premiums: Mr. MacDonald references
24 Damadoran's web site, is he aware that Damadoran's estimates (cost of
25 capital by sector, January 2012) for US electric equity costs are:
26 a. Electric utility (Central): 6.41%,
27 b. Electric utility (east): 6.08%,
28 c. Electric utility (West): 6.40%?
29

30 CA-PUB-34 Reference pages 26-33: Risk Premiums: Is Mr. MacDonald aware that
31 Damadoran's risk premium estimate for Canada, like those for all
32 countries, is from a US perspective where he simply adds a risk premium
33 on top of his US market risk premium. Does Mr. MacDonald believe this
34 makes sense from a Canadian rather than a US perspective?

1
2 CA-PUB-35 Reference pages 34-37: DCF Estimates: Mr. MacDonald indicates that
3 given the strong degree of integration between the US and Canada
4 looking at US DCF evidence is informative, However, since he makes no
5 adjustments to his estimates would be confirm that he judges the US and
6 Canada to be identical? If not, why not?
7

8 CA-PUB-36 Reference pages 34-37: DCF Estimates: Would Mr. McDonald confirm
9 that in order for estimates from one country to be used in another the "law
10 of one price" has to hold and that the markets be perfectly integrated with
11 identical fundamentals? If not, why not?
12

13 CA-PUB-37 Reference pages 34-37: DCF Estimates: Can Mr. MacDonald confirm
14 that currently that yield curves in the US and Canada are completely
15 different? In particular, that long US treasuries are yielding 0.40% more
16 than long Canada and that this is forecast to increase even more to 1.0%
17 by the end of 2013?
18

19 CA-PUB-38 Reference pages 34-37: DCF Estimates: Would Mr. MacDonald regard
20 a 1.0% difference in government borrowing costs as support for identical
21 fundamentals in the U.S. and Canada? If the answer is yes, please
22 explain in detail.
23

24 CA-PUB-39 Reference pages 34-37: Use of U.S. Estimates in Canada: Can Mr.
25 Macdonald confirm that Canadian regulators have found US data to be
26 informative but have also indicated that a framework of adjustment has to
27 be used, where the BCUC for example reduced US DCF estimates by
28 0.50-1.0%.
29

30 CA-PUB-40 Reference pages 34-37: Use of U.S. Estimates in Canada: Please
31 indicate the extent to which Mr. MacDonald has reduced his US estimates
32 in line with the decision of the BCUC.
33

1 CA-PUB-41 Reference pages 34-37: Use of U.S. Estimates in Canada: In terms of
2 Mr. MacDonald's US "comparables" please indicate which ones are
3 electric companies and examine Dr. Booth's schedule 6 where he has
4 actual ROEs for 14 US electric companies. In Mr. MacDonald's view is
5 the variability of the ROEs as similar between these 14 US electrics and
6 NP?

8 CA-PUB-42 Reference pages 34-37: Use of U.S. Estimates in Canada: Please
9 provide the annual EPS and DPS data for the six US electrics since 1990
10 and indicate whether there is any support for the assumption that their
11 long run growth rate is the same as that of nominal GDP (page 36).

13 CA-PUB-43 Reference pages 34-37: Use of U.S. Estimates in Canada: Please
14 indicate where Mr. MacDonald has downwardly adjusted the analyst
15 forecasts for their well-known optimism bias? If he has not adjusted them
16 please cite all papers he has relied on for assuming that such forecasts
17 are unbiased.

19 CA-PUB-44 Reference pages 34-37: Use of U.S. Estimates in Canada: Please
20 confirm that the assumed long run inflation forecast for the US of 2.40%
21 (page 36) is 0.40% higher than the middle of the Bank of Canada's
22 operating range.

24 CA-PUB-45 Reference pages 29-30: ERP Estimates: Please provide the return on
25 the TSX Composite matching that of the utilities in Table 15.

27 CA-PUB-46 Reference pages 29-30: ERP Estimates: Please provide the return on
28 the long Canada bond matching that of the yield in Table 15.

30 CA-PUB-47 Reference pages 29-30: ERP Estimates: Please indicate the basis for
31 using a risk premium of actual equity returns over a bond yield, rather
32 than a bond return. Please provide citations to published research in peer
33 refereed academic journals (not consulting reports) that would support a
34 mismatching of returns with yields as is indicated in Table 15.

1
2 CA-PUB-48 Reference pages 29-30: ERP Estimates: Please confirm that the utilities
3 index data included the Telcos since they were part of the utilities group
4 at the time.
5

6 CA-PUB-49 Reference pages 29-30: ERP Estimates: Please confirm that the index
7 implicitly includes Northern Telecom (Nortel) through its indirect
8 ownership by Bell Canada Inc.
9

10 CA-PUB-50 Reference pages 29-30: ERP Estimates: Please indicate why Mr.
11 MacDonald would base a return for NP at least in part by an index that
12 reflected the internet boom and bust and the price behaviour of Nortel?
13

14 CA-PUB-51 Reference pages 29-30: ERP Estimates: Please confirm that Mr.
15 MacDonald has read the Moody's reports that indicate the greater
16 regulatory risks in the US than Canada, that 50% of Moody's weight is
17 placed on this risk and that Mr. MacDonald has chosen to ignore this. If
18 not please indicate where he has assessed the regulatory risk of his
19 sample of U.S. utilities as comparables to ensure that their regulation and
20 overall risk is identical to that of NP.
21

22 CA-PUB-52 Reference pages 38-41: AAM: Mr. MacDonald notes that in 2011 NP's
23 allowed ROE of 8.38% was the lowest in Canada, please confirm that
24 statement with respect to the generic ROE decided by the NBPUB in
25 2010 and the actual ROEs allowed both Union Gas and EGDI.
26

27 CA-PUB-53 Reference pages 38-41: AAM: Does Mr. MacDonald judge the
28 opportunity cost of investing in a public utility to be unrelated to the
29 interest rate on the long government bond? If so please indicate all
30 research he has undertaken into securities that are regarded as close
31 substitutes to utility common shares.
32

1 CA-PUB-54 Reference pages 38-41: AAM: Please indicate the current yield on
2 conventional utility preferred shares and whether Mr. MacDonald views
3 utility preferred shares as close substitutes to utility common shares.
4

5 CA-PUB-55 Reference pages 38-41: AAM: Is Mr. MacDonald aware that
6 investment dealers routinely repackage utility common shares into
7 preferred shares and capital gains strips, since they are so dividend rich?
8

9 CA-PUB-56 At p. 2 of the Report, Mr. McDonald states that in forming the conclusion
10 that the Company's forecast common equity ratio of 45% for 2013 and
11 2014 is reasonable, "we also considered the stable trend in the equity
12 ratios of its investor-owned Canadian utility peers for the period of 2010 –
13 2012. Explain how the stability of other utilities consistently lower equity
14 ratios support the continued need for the Company to have the highest
15 equity ratio in Canada?
16

17 CA-PUB-57 At p. 21, Mr. McDonald states that, "If the common equity ratio were
18 lowered, credit returns could weaken." Dr. Booth's report, at p. 80,
19 recommends that 5% in common equity be replaced with preferred
20 shares. Dr. Booth makes the following statement at line 15: "However,
21 unlike bonds these [i.e. preferreds] are similar to equity and paid out of
22 after tax income so they therefore support the credit rating, as they do not
23 add fixed interest." Does Mr. McDonald agree with this statement?
24 Why or why not?
25

26 CA-PUB-58 Does Mr. McDonald agree with Dr. Booth's statement at p. 80 for 2011
27 that the loss of EBIT of \$3 million would have reduced the EBIT interest
28 coverage rate from 2.88X to 2.80X and the cash flow to debt from 18.1%
29 to 17.5%?
30

31 CA-PUB-59 Does Mr. McDonald agree with Dr. Booth that the changes described in
32 the previous question are not to be regarded as significant enough to
33 cause any problems with Newfoundland Power Inc. preserving it's A bond
34 rating?

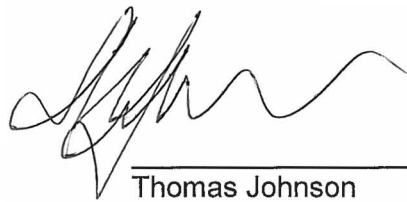

1
2 CA-PUB-60

At p. 37, Mr. McDonald states, "We considered the debt ratings to be an objective indication of total risk. Since we did not find significant differences in total risk between our proxy group and the Company, we did not make any further adjustments to our results." Please reconcile this statement with the statement at p. 6, lines 319 – 320 under the heading "credit ratings" – ". . . However we caution that bond ratings are not necessarily a good indication of the risks face (sic) by a company's equity holders."

10
11 CA-PUB-61

At p. 37, Mr. McDonald states, "We consider the debt rating to be an objective indicator of total risk. Since we did not find significant differences in total risk between our proxy group and the Company, we did not make any further adjustments to our results." Given that Mr. McDonald considers debt ratings to be an objective indicator of total risk, would it not follow that in order for Mr. McDonald to find 'significant differences in total risk' that would require that the companies in the proxy group have a different credit rating than Moody's Baa 1? Please explain.
