

1 **Q. McShane Evidence – Which of the companies in her sample does Ms. McShane**
2 **consider to be transmission and distribution utilities? For each, state the amount of**
3 **generation assets that each has.**
4

5 A. Ms. McShane considers Consolidated Edison to be an electric transmission and
6 distribution utility. The net book value of its generating plant at the end of 2011 was
7 \$471 million, versus total assets of \$39 billion. AGL, Atmos, Northwest Natural,
8 Piedmont and WGL Holdings are gas distribution utilities. None of these companies has
9 any electric generating capacity. She would also consider Vectren to be primarily a
10 distribution utility; its largest utility operations are gas distribution operations.
11 Generation net plant was \$700 million of total assets of \$4.9 billion.
