6 **that the Company is aware of that it has not implemented, provide the detailed**
7 **support and justification for electing not to implement such change.**

8
9 A. The Canadian Electrical Code establishes standards for overhead services.¹ Paragraph
10 4.1.2 of the Canadian Electrical Code states that “all electric supply and communications
11 lines and equipment shall be of suitable design and construction for the service and
12 conditions under which they are to be operated.” As a result, the type of design,
13 installation or materials used by each utility will vary depending upon conditions under
14 which the lines and equipment are to be operated. Changes made elsewhere in the
15 industry would not necessarily be relevant to Newfoundland Power’s operations.

16
17 Newfoundland Power does not have a listing or specific documentation of *all* changes the
18 Company has implemented with respect to the design, installation or materials associated
19 with overhead services or those that have occurred elsewhere in the industry.

20
21 See the response to Request for Information CA-NP-678 regarding Newfoundland
22 Power’s incremental improvements with respect to the design, installation and materials
23 associated with overhead services and the resulting extension of service lives.

¹ The Canadian Electrical Code Part III, which is also referred to as CSA CA-22.3.
