

1    Q.    **Project C-9: Rehabilitate Salmon River Spillway – Bay d’ Espoir**

2            At page 9 of the Hydro’s Report found at Volume 1, Tab 4, Hydro notes that the  
3            “reliability for all three gates to open when required for spilling is critical” however  
4            it appears that only \$50,800.00 in maintenance has been required for the period  
5            2009-2013 and only two major works or upgrades have been carried out since 2009  
6            when the Hatch Report was completed (see Table 1 at page 8 of the Report of  
7            Hydro).

8            Which of the recommendations contained in Hatch’s Report have been  
9            implemented since 2009?

10

11

12    A.    Please refer to Hydro’s responses to IC-NLH-021, IC-NLH-022 and IC-NLH-023.
