

1 Q. Reference: Increase Fuel Storage Rigolet, Volume II, Tab 18, Page 15  
2 *“The community government in Rigolet is building a new 7,800 foot recreation*  
3 *center which is expected to be connected by the summer of 2014. The total*  
4 *connected load will be 196 kW with 94 kW allocated for electric heat.”*

5 Did the community government participate in either of Hydro’s conservation  
6 initiatives? If so, please describe what upgrades were supported by the programs.  
7 If not, why.  
8  
9

10 A. The community government did not participate in any of Hydro’s conservation  
11 initiatives. The Nunatsiavut Government is aware of the program, as they have  
12 been approached by Hydro. Nevertheless, the original design of the community  
13 centre has considered energy conservation, which is described in more detail in the  
14 response to NP-NLH-036. The purpose of Hydro’s Business Efficiency Programs are  
15 to provide incentives for installing energy efficient products or technologies. This  
16 building was built using many efficient products and the building envelope was  
17 designed to be very efficient.  
18

19 Hydro is not aware of the reason that the community government did not  
20 participate in either of Hydro’s conservation initiatives.
