1    Q.    **C-61; Volume II, Tab 26: Install Automated Meter Reading – Various Sites**

2        Please provide a description of the new Landis + Gyr's PLX system and its

3        capabilities.

4

5

6    A.    The new PLX system provides the following immediate key benefits:

7        •   15 minute intervals of kWh or voltage continuously from every endpoint;

8        •   45 days of storage of interval data at the endpoint; and

9        •   Remote reflashing capability to avoid obsolescence of module firmware.

10

11        The following additional capabilities are also supplied:

12        •   Outage management improvement with unsolicited alerts and

13          restoration confirmation from each meter;

14        •   Daily minimum, maximum and average voltage reads with time of

15          occurrence;

16        •   Remote control of four time-of-use rates within multiple schedules and

17          rates;

18        •   Automatic and immediate notification of meter tampering; and

19        •   Remote disconnect/connect (with additional hardware).
