1 Q. Reference: *Purchase 12MW of Diesel Generation (Revised)*, Appendix B, Page B-

2 1.

3

4 Please update the table on page B-1 of Appendix B that lists the Dispatch of

5 Holyrood Diesel Generators to include the period December 24, 2015 to March 9,

6 2016. In the response, please include the average output (MW) for the diesel

7 generators for each occasion they were operated.

8

9

10 A. Please see the attached revised table (DG-NP-NLH-005 Attachment 1).

11

12 Hydro does not have real time readings for these units in its EMS system and thus

13 we do not have the average output (MW) for the diesel generators for each

14 occasion they were operated. We get monthly meter readings for our statistical

15 and financial reports. However, generally, the diesels are loaded to 9.250 MW when

16 they are turned on.
