

1 Q. **Tab 18; Volume III: Replace Disconnect Switches**

2 Please explain why Hydro's Asset Management Plan does not require tracking of
3 the reliability performance of disconnect switches along with the performance of
4 terminal stations.

5

6

7 A. Currently, Hydro measures reliability performance at the Delivery Point or Terminal
8 Station level as a part of Hydro's Corporate key performance indicators for
9 reliability. The measurement of reliability at this level is consistent with the
10 Canadian Electricity Association and allows Hydro to benchmark our reliability
11 indicators with other Canadian Utilities.

12

13 Hydro does not track the reliability performance of disconnect switches, as these
14 disconnect switches are a sub-component within terminal stations.
