

1 Q. Consumer Question: Re: Conservation and Demand Management: In your conclusions
2 and key findings on load forecasting (V. 2, s. 1.11, p. 39), you note that the amount of
3 variability due to potential load could materially impact the results of the CPW analysis.
4 In your analysis, have you tried to identify the impacts on the CPW analysis of a
5 successful CDM program more aggressive than the one implicit in the load forecast? If
6 not, why not? If so, what were your results?

7
8 A. MHI did not complete additional analysis concerning a more aggressive CDM program
9 than that implicit in the load forecast provided by Nalcor. MHI reviewed Nalcor's work
10 and analysis related to the two alternatives as provided in the reference question. Nalcor
11 however in its final submission, Page 126 of 158 *Revision 1, November 30, 2011*, did
12 included two sensitivities for a moderate and aggressive CDM program.
