

1 Q. Consumer Question: This relates to the relative cost (as compared to the isolated
2 island option or the muskrat falls option) of building a transmission line through
3 Labrador and into Newfoundland in such a way that we could purchase the
4 additional power needed from Quebec Hydro. Such an option may prove viable
5 without the cost of developing Muskrat Falls. The transmission line could be used
6 in the future should development be a viable option. Would Nalcor please
7 comment on this option?
