

1 Q. In discussions with staff at the Holyrood facility on Aug. 19, 2011 a relevant report
2 was identified. Please provide the report where ABB carried out an investigation
3 around 2005/06 for Holyrood on various options and provided a study report on the
4 viability of different fuels, combustion technologies and backend emission control
5 strategies.

6

7

8 A. The requested report that deals with different fuels, combustion technologies and
9 backend emission control strategies would have had to have been either the 2002
10 report conducted by Alstom, or the 2004 report conducted by Hatch; ABB was not
11 involved with emissions studies for the plant. Please see attached Exhibits-66 & 68.

12

13 It should be noted that the current Certificate of Approval for Holyrood specifies
14 that fuel with no greater than 0.7 percent sulphur content be used, so any
15 recommendations contained in these reports relating to fuel selection must be
16 considered in light of the plant's current approved conditions.
