

1 Q. What load factor would the Holyrood Plant have to operate at to exceed the  
2 Government's 25,000 tons per year limitation using 0.7% sulphur fuel and, using the  
3 current load forecast, when would this occur?

4

5

6 A. Based on a fuel source containing 0.7% sulphur by weight, SO<sub>2</sub> emissions would be  
7 less than 25,000 tonnes per year if the facility operated at 100% capacity factor.
