

1 **Re Page B-36:**

2 Q. Show calculation of cost savings, if any, to be expected from undertaking this
3 work in 2008 as opposed to 2009.

4

5

6 A. The cost savings have not been explicitly quantified. The scheduling of
7 upgrade work to the tank interior will coincide with critical work in 2008 which
8 requires tank draining and cleaning. The savings are related to the costs
9 associated with tank draining/cleaning once rather than twice. Draining and
10 cleaning a tank interior costs in excess of \$200,000.
