

1 **Re: Page B-50, Replace Unit 2 Main Steam Stop Valve \$171,300**

2 Q. Please explain, including information on cost, why “The new valve was
3 purchased and delivered to the plant in 2006”.

4

5

6 A. The valve was purchased at a cost of \$87,131.00. It was intended that the
7 valve would be purchased and installed in 2006 but the delivery period of the
8 valve was found to be so long that it could not be installed during the
9 scheduled outage. The valve will be installed during the next convenient
10 outage in 2008.
