

1 **Re: Page B-136, Construct Bushing Storage Building, \$334,900**

2 Q. What options were considered in evaluating this project?

3

4

5 A. The following options were considered for this project:

6 • Find existing suitable space to store bushings. No suitable space was
7 available.

8 • Continue to store bushings outdoors. Our experience and
9 recommendations from the manufacturers indicate the right long term
10 solution is to store bushings in an inside location.

11 • Store bushings in an inside newly constructed building high enough to
12 allow bushings to be mounted vertically.
