

1    Q.    **Re: Technical Conference Phase II Presentation NO. 1 – Holyrood Condition**  
2           **Assessment Technical Conference, page 13.**

3           Please describe the organization structure and identify the 38 positions indicated as  
4           required to operate the Holyrood plant beyond 2020 as a synchronous condenser  
5           operation only.

6  
7  
8    A.    At this time, the organizational structure for Holyrood post-2020 is still under  
9           development, as is the final staffing requirements. Of the approximate 38 positions  
10          expected for post-2020 operation, roughly 75% of the positions would be in-scope  
11          employees, with the balance being out-of-scope. Hydro is not in a position, at this  
12          time, to identify exact positions, as staffing is the subject of ongoing discussions.
