

1    Q.    **Re: 2012 Capital Plan**

2            What is the status of the work required to determine the capital projects necessary  
3            at the Holyrood Thermal Generating Station in the event of a “*No Infeed Scenario*”?

4

5

6    A.    No significant work has been planned at this time to determine the capital projects  
7            necessary at the Holyrood Thermal Generating Station in the event of a no infeed  
8            scenario, as Hydro’s least cost generation planning alternative of the Labrador  
9            Interconnection remains viable. Capital work has been planned at this time for the  
10           same operating requirements as a no infeed scenario to 2020, whereby Holyrood  
11           would continue as a thermal (base or standby) generating station to 2020. Incurring  
12           the costs of planning the additional work required for a no infeed scenario would  
13           not be prudent at this time. For more information on the impact of planning for  
14           the Isolated Island operation of Holyrood as compared to the Labrador  
15           Interconnection conditions, please refer to the response to P2-PUB-NLH-4.
