

1 Q. Re: Data: Please provide the input data for each separate life and salvage analysis  
2 on electronic medium in Excel readable format. Further, clearly identify what each  
3 value represents.

4

5

6 A. Please refer to the CA-NLH-1 Attachment 1 and Attachment 2, which provide input  
7 data for the retirement rate analysis prepared by Gannett Fleming, and the  
8 additional information required for converting the data files to the account  
9 structure as presented in the Gannett Fleming depreciation study.

10

11 CA-NLH-1 Attachment 1 provides the account by account vintages, balances and  
12 aged retirements used as input to the Gannett Fleming models. The "Amount"  
13 column represents original cost for retirement transactions, and net depreciable  
14 cost for balance transactions. CA-NLH-1 Attachment 2 provides a mapping from the  
15 account structure that was in place at the time the retirement rate analysis was  
16 prepared to the final account structure that was used in the Application. In April  
17 2011, Hydro revised the naming convention of its plant accounts to the format that  
18 was presented in the Gannett Fleming report. As such a mapping of the old account  
19 numbers to the new account numbers is required in order to properly match the  
20 data files to the Gannett Fleming report.
