

**Undertaking 130**

**RE: GT-CA-NLH-005 Attachment 1. Undertaking to provide whether there is a formula/structure regarding the weighting of the ratings within the document that would have led you to issue the award.**

The referenced table is a tool to review compliance with the project technical specifications. It uses a simple yes/no process (represented by a 1 or a 0 respectively) to record whether the various technical specification items have been met or if sufficient information has been provided. This technical analysis is one element of the overall evaluation which takes into account the tender, which provides for the most cost effective completion of the contract and the greatest value to the owner. There is no specific weighting of the ratings for the technical analysis, cost, and kW output other than determining the least cost compliant bid with respect to the tender document. The response to GT-CA-NLH-005 provides detail on the overall evaluation process.
