Q. At section 4.5, page 10 of the Appendix A July 2013 Rate Stabilization Plan Evidence, it is proposed by Hydro that the August 31, 2015 balance in the IC RSP Surplus will be applied to the IC RSP plan in effect at that time, and will be included in the regular RSP adjustment calculations, to be applied on January 1, 2016. At section 6.0, page 14 of the Appendix A Evidence, Hydro summarizes its proposal in this regard as follows: "Any remaining balance, positive or negative, in the IC RSP surplus on August 31, 2015 will be transferred to the regular IC RSP account...". Based on the forecast rates shown in Table 3 at page 11 of the Appendix A Evidence, and Hydro's current information, forecasts and assumptions regarding respective industrial customer loads to August 31, 2015, please provide Hydro's forecast or estimate, either as already prepared or to be prepared to enable Hydro's response to this request for information, as to whether the August 31, 2015 balance in the IC RSP Surplus is forecast or estimated to be a positive balance or a negative balance. Please include with Hydro's response the forecast or estimated amount, or if Hydro is not able to forecast or estimate an amount, then an order of magnitude forecast or estimate, of the positive or negative balance in the IC RSP Surplus as at August 31, 2015.

A. Please refer to the response to IC-NLH-1 as it provides a forecast balance of the proposed IC RSP Surplus as at August 31, 2015.
