

1 Q. Assuming Hydro's estimate of a \$39 million IIC class RSP deficit for the period from  
2 January 1, 2008 to August 31, 2013 had been able to be recovered in rates paid by  
3 the Industrial Customer class during this January 1, 2008 to August 31, 2013 period,  
4 and assuming no other potential adjustments to the interim rates paid by the  
5 Industrial Customer class during this same period, please calculate the increased  
6 rates that would have had to have been paid by (a) Corner Brook Pulp & Paper and  
7 North Atlantic Refining, as compared to the interim rates paid by them and (b) Teck  
8 Resources, Vale and Praxair, as compared to the interim rates paid by them? If  
9 Hydro is able to provide, in response to IC-NLH-12, a finalized deficit amount, please  
10 substitute that final amount for the \$39 million estimate for the purposes of  
11 responding to the foregoing question.

12

13

14 A. Please refer to the response to CA-NLH-7 for rates which were charged to the IC,  
15 and those which would have been charged had the RSP rules, adjusted to provide  
16 for the energy ratio based allocation of the load variation, been applied. The latter  
17 would have, in essence, eliminated the \$39 million.
