

1 Q. (April 10, 2014 report entitled Supply and Install 100 MW (Nominal) of Combustion
2 Turbine Generation) It is stated (page 9) "*Hydro is proposing to negotiate*
3 *interruptible contracts with major industrial customers at least for 2014-2015*".
4 What is the status of these negotiations?

5

6

7 A. Hydro filed a work plan for securing interruptible loads with the Board in its June
8 16, 2014 Generation Availability Report and is currently working through each of
9 the items indicated in the work plan, including entering into interruptible
10 arrangements.

11

12 Hydro has contacted all its Industrial Customers. Hydro is currently awaiting
13 response from some customers as to their ability to participate in an interruptible
14 service and/or capacity assistance arrangements based on their operational
15 requirements. A number of meetings have been held with Corner Brook Pulp and
16 Paper and Vale, which have the highest potential of providing significant levels of
17 interruptible load.

18

19 Discussions to date have addressed the magnitude of interruptible and/or capacity
20 assistance that each Industrial Customer could potentially provide, as well as the
21 costs associated with interrupting their operations and any foreseeable limitations
22 to the provision of the service.
