

1 Q. The report states the LIL has a continuous monopolar operation - earth return  
2 current of 1,929Adc. What is the allowable continuous current for monopolar  
3 metallic return operation?  
4  
5

6 A. When the Labrador – Island HVdc Link is operating in the monopolar metallic return  
7 mode of operation, there must be a minimum of one submarine cable connected to  
8 each pole conductor to complete the metallic return circuit. In this configuration,  
9 the continuous current rating is 1286 Adc.
