

1 Q. At page ix of Hydro's report "Upgrade Transmission Line Corridor" dated April 28,
2 2014, Hydro states that following conclusion of the CT proposal and clarification of
3 its characteristics the requirements for further reactive support in the Avalon
4 Peninsula area will be determined. Does Hydro expect there to be any further
5 clarification of the characteristics of the combustion turbine to be installed at
6 Holyrood? If yes, what are those additional characteristics which still require
7 clarification and when are they expected to be clarified? If no, then has Hydro
8 identified the requirements for further reactive support in the Avalon Peninsula
9 area, and will these requirements alter any of the characteristics (including costs) of
10 the elements included in Hydro's proposed transmission line project?

11

12

13 A. Hydro does not expect there to be any further clarifications of the characteristics of
14 the combustion turbine being installed at Holyrood. The alternatives to meet the
15 requirements for additional reactive support on the Avalon Peninsula are provided
16 in Hydro's response to CA-NLH-003.
