

1 Q. Page 66 of the Upgrade Transmission Line Corridor Report states that the right of
2 way needs approximately 35 km of the circuit that is within or borders the Bay du
3 Nord Wilderness Reserve. For the 153 km balance has all of the necessary right of
4 way been secured for this new circuit? If not, what are Hydro's plans for securing
5 any outstanding properties and are there any potential litigations with either the
6 province or individual property owners that could delay the schedule?

7

8

9 A. The balance of the necessary right of way has not been secured at this time.
10 Currently, the final mapping for the route is being prepared to identify Crown Lands
11 and any third party or private property owners. Once complete, an application to
12 Crown Lands will be submitted under the normal application process to secure
13 Crown land. Any identified third party or private property owners will be contacted
14 to gain the appropriate permissions. At this time, there have been no issues
15 identified that could delay the schedule.
