

1 Q. **Reference: Volume I, Holyrood Overview Future Operations and Capital**
2 **Expenditure Requirements, Page 6**

3 For both Phase 1 and Phase 2 the phrase “few changes are expected in terms of
4 maintenance strategy” is used to describe the anticipated maintenance regime for
5 both normal production and standby production. Please provide a description of
6 any difference in maintenance regime, as it affects the capital plan for Holyrood, in
7 the normal production and standby production phases going forward.

8

9

10 A. Hydro has not yet established the maintenance regime required for standby
11 production. The detailed work associated with that analysis is expected to be
12 performed in 2015 but no significant changes are anticipated to the maintenance
13 regime since all three units are expected to be operable to full load during the
14 standby period. It should be noted, however, that equipment maintenance
15 intervals which are based on annual operating hours may be extended beyond
16 normal timeframes during the standby period, depending on actual operating
17 hours.
