St. John's, NL A1A 5B2

**Attention: Ms. G. Cheryl Blundon, Director of Corporate Services
and Board Secretary**

Dear Ms. Blundon:

Re: 2014 Hydro Capital Budget

Please find enclosed the original and eight (8) copies of the Requests for Information IC-NLH-1 to IC-NLH-68 of the Island Industrial Customers in the above Application.

We trust you will find the enclosed to be in order.

Yours truly,

Stewart McKelvey

Paul L. Coxworthy

PLC/kmcd

Enclosure

- c. Mr. Geoffrey P. Young, Senior Legal Counsel, Newfoundland and Labrador Hydro
Mr. Thomas J. Johnson, Consumer Advocate
Mr. Gerard Hayes, Newfoundland Power
Mr. Dean A. Porter, Poole Althouse
Mr. Thomas O'Reilly, Q.C., Vale Newfoundland and Labrador Limited

IN THE MATTER OF the *Public Utilities Act*,
RSNL 1990, c. P-47, as amended (the "Act")

IN THE MATTER OF an Application by
Newfoundland and Labrador Hydro for an
Order approving: (1) its 2014 Capital Budget
pursuant to Section 41(1) of the Act; (2) its
2014 capital purchases, and construction
projects in excess of \$50,000 pursuant to
Section 41(3)(a) of the Act; (3) its leases in
excess of \$5,000 pursuant to Section
41(3)(b) of the Act; and (4) its estimated
contributions in aid of construction for 2014
pursuant to Section 41(5) of the Act and for
an Order pursuant to Section 78 of the Act
fixing and determining its average base rate
for 2012.

REQUESTS FOR INFORMATION OF THE ISLAND INDUSTRIAL CUSTOMERS

IC-NLH-1 to IC-NLH-68

Project C-11, Upgrade Shoreline Protection – Cat Arm

IC-NLH-1 At page 4 of the report filed at Volume I, Tab 3, Hydro states that:

"Extreme environmental conditions in the area have
damaged the shoreline protection barrier along an 80m
section. These conditions and this type of damage were
unforeseen during original construction."

Please provide any correspondence, engineering reports or other
documentation generated or received, not already provided with
Hydro's Application, relating to the shoreline protection barrier from
when it was first designed and constructed to date, including
without limiting the foregoing any such documentation which
considered wind/wave action upon the intended barrier.

IC-NLH-2 At page 4 of the report filed at Volume I, Tab 4, Hydro notes that it
submitted an Application for Permission to Occupy Crown Lands in
2012 and subsequently applied for a Crown Easement to the road
lands, which application is pending approval. When was the
application for easement submitted? When does Hydro expect this
application to receive approval?

1 **IC-NLH-3** Has Hydro considered the option of simply replacing the armour
 2 stone which has been washed out into the ocean at this time and
 3 postponing the two-year project involving engineering investigation
 4 and design to a later date?

5 **IC-NLH-4** On page A6 of the report filed at Volume I, Tab 4, AMEC advised
 6 that a preliminary cost estimate to conduct the reconstruction was
 7 in the order of \$366,000 in May, 2010. Why is Hydro's budget
 8 estimate (\$763,000) more than double AMEC's original cost
 9 estimate? Please provide all facts and assumptions considered by
 10 Hydro to justify the increased budget estimate.

11 **Project C-13, Upgrade North Cut-Off Dam Access Road – Bay d'Espoir**

12 **IC-NLH-5** At page 6 of the report filed at Volume I, Tab 5, Hydro states that
 13 "When attempting to conduct repairs on damaged components of
 14 the vehicle, employees are often placed in situations in which there
 15 is an increased risk for injury. The nature of the typical repair
 16 presents a risk of injury by way of heavy lifting, crushing, burns, and
 17 abrasions". Please provide a full account of any such injuries
 18 incurred or experienced by Hydro personnel in the last five (5)
 19 years, including date and nature of injury suffered.

20 **IC-NLH-6** At page 7 of the report filed at Volume I, Tab 5, Hydro states that
 21 given the current condition of the road there are no viable
 22 alternatives outside of completing the proposed upgrades. The
 23 maintenance history table shows that \$7,000 was spent on
 24 maintenance in 2012, up from \$1,000 or less in the previous years.

25 ○ Please provide details of the maintenance performed in 2012 as
 26 well as a description of how the 2012 maintenance differs from
 27 the previous years.

28 ○ Is the increase in maintenance costs a result of new issues
 29 arising with the roadway or old issues being addressed?

30 ○ Has Hydro considered whether routine maintenance would be
 31 sufficient to keep the road open and passable with major
 32 upgrade work to be completed at a later date? If no, provide
 33 Hydro's explanation for same.

34 **Project C-15, Automate Generator Deluge Systems – Bay d'Espoir**

35 **IC-NLH-7** On page 4 of the report filed at Volume I, Tab 6, Hydro states that
 36 the estimated response time of operations personnel from the time
 37 they receive the alarm to the time the unit deluge system is
 38 activated is approximately six to eight minutes. With the fully
 39 automated system, what is the expected time period between the

detection of the fire and the application of water (or other applicable fire suppressant) to the fire?

Project C-18, Overhaul Turbine/Generator Unit 2 - Holyrood

IC-NLH-8 On page 5 of the report filed at Volume I, Tab 7, Hydro explains that the work to be completed consists of three types, namely "Routine Standard Work", "Defined Work" and "Unforeseen Work".

- What factors are considered by Hydro in determining what work should be included as "Defined Work" (extra to the Standard Work)?
- When will the "Defined Work" be identified?
- Is the cost of the "Defined Work" included in the budget estimate?
- Is the cost of the "Unforeseen Work" associated with the overhaul of Unit 1 expected to be included in the \$815,000.00 contingency for this Project?

IC-NLH-9 On page 13 of the report filed at Volume I, Tab 7, Hydro states that the total amount spent on the 2012 overhaul of Unit 1 was \$4.0 million, but advises that the estimate for Unit 2 is greater than \$5 million due to a 20 percent contingency and an increase in contract costs. Please provide all facts and assumptions considered by Hydro to justify the increased contingency and contract costs.

IC-NLH-10 On page 13 of the report filed at Volume I, Tab 7, Hydro states that replacement of the stator windings will be required to extend the generator life beyond that date (2015). Following the overhaul, what is the expected remaining life of the generator?

IC-NLH-11 On page 14 of the report filed at Volume I, Tab 7, Hydro states that there are no alternatives to this project other than to delay the major overhaul which is not acceptable. Has Hydro done any research to determine whether other public utilities in the industry follow a major overhaul frequency of greater than nine years?

Project C-20, Complete Condition Assessment Phase 2 – Holyrood

IC-NLH-12 On page 9 of the report filed at Volume II, Tab 8, Hydro advises that the focus of this project will be on Unit 3 high energy piping, Unit 3 boiler locations and the Unit 2 generator. Inspection and refurbishment of Units 1 and 3 generators are addressed under the regular overhaul schedule in Hydro's capital program; only the Unit 2 generator is included in the scope of the 2014 program. Explain

1 why the Unit 2 generator is not included in the regular overhaul
 2 schedule, particularly given that Project C-18 relates to the major
 3 overhaul of Unit 2 turbine and generator.

4 **Project C-22, Upgrade Excitation Systems Units 1 and 2 – Holyrood**

5 **IC-NLH-13** What is the Life Cycle Management Plan for Unitrol 6080?

6 **IC-NLH-14** Has Hydro considered delaying the purchase of the second control
 7 panel to 2015 when it plans to install the second panel, rather than
 8 purchasing both panels in 2014?

9 **Project C-24, Upgrade Plant Elevators – Holyrood**

10 **IC-NLH-15** On page 6 of the report filed at Volume II, Tab 10, Hydro provides
 11 examples from February 2010, August 2009 and May 2006 when
 12 people were trapped in the elevators. Have there been any
 13 incidents recorded since 2010? Has Hydro implemented any
 14 measures to reduce the likelihood of such events?

15 **IC-NLH-16** Will these elevators experience the same level/frequency of usage
 16 after Holyrood is converted to synchronous condenser mode?
 17 Explain why one elevator would not suffice to provide necessary
 18 access after Holyrood is converted to synchronous condenser
 19 mode.

20 **Project C-28, Replace Economizer Inlet Valves – Holyrood**

21 **IC-NLH-17** On page 4 of the report filed at Volume II, Tab 12, Hydro advises
 22 that since 2010, staff have used an upstream shut off valve instead
 23 of the economizer inlet valve to isolate the boiler from the feed
 24 water supply.

25 ○ Have any incidents been encountered in using the upstream
 26 shut off valve since 2010?

27 ○ What has changed such that the bypass valve no longer
 28 provides an adequate seal for feed water isolation?

29 **Project C-30, Install Cold-Reheat Condensate Drains and High Pressure Heater**
 30 **Trip Level Unit 3 – Holyrood**

31 **IC-NLH-18** Why was the “Contingency” budget for this project increased from
 32 10% to 20%?

33 **IC-NLH-19** Have there been any incidents of water damage to the steam
 34 turbine in Unit 3 thought to be a consequence of water in the cold
 35 reheat lines? If so, please provide details of any incidents.

1 Project C-33, Upgrade Gas Turbine Plant Life Extension – Stephenville

2 **IC-NLH-20** On page 6 of the report filed at Volume II, Tab 14, Hydro states that
3 the items to be completed in 2014, and referenced to Source 1, are
4 justified by the Stantec report and then provides justification for the
5 other items on pages 9-10. Has Hydro considered simply
6 completing the Source 1 items at this time?

7 **IC-NLH-21** Given the plant's role as a synchronous condensing system, has
8 Hydro considered relying on a corrective maintenance regime?

9 **IC-NLH-22** Will this plant be decommissioned when Muskrat Falls becomes
10 operational?

11 **IC-NLH-23** How has the plant upgrade for Hardwoods improved reliability?

12 Project C-35, Upgrade Circuit Breakers

13 **IC-NLH-24** On page 5 of the report filed at Volume II, Tab 15, Hydro states that
14 13 air blast circuit breakers are to be replaced in conjunction with
15 the Lower Churchill Project. Please explain. Is the cost of these
16 replacements still included in the Capital Budget?

17 **IC-NLH-25** How many oil circuit breakers does Hydro currently have in
18 service?

19 **IC-NLH-26** Provide a copy of the extension granted to Hydro in 2010 allowing
20 Hydro until December 31, 2014 to remove all sealed equipment
21 containing PCBs greater than 500mg/kg.

22 **IC-NLH-27** What is the status of the application for regulatory amendment to
23 allow the use of bushings and instrument transformers with PCB
24 concentrations of 500mg/kg and greater until December 2025?

25 **IC-NLH-28** Given that various circuit breakers are being replaced in 2014, why
26 does Hydro plan to wait until 2015 to commence a partnership
27 agreement to engage a contractor for the supply and installation of
28 circuit breaker replacements?

29 Project C-38, Upgrade Power Transformers

30 **IC-NLH-29** On page (i) of the report filed at Volume II, Tab 16, Hydro states
31 that its methodology is aligned with procedures of other North
32 American utilities with similar transformer assets. Provide specific
33 examples of other North American utilities following this
34 methodology.

35

1 Project C-40, Replace Disconnect Switches

2 **IC-NLH-30** On page 11 of the report filed at Volume II, Tab 17, Hydro states
3 that its approach to the disconnect replacement program is
4 consistent with the utility industry practice. Please provide support
5 for this statement.

6 **IC-NLH-31** On page 11 of the report filed at Volume II, Tab 17, Hydro states
7 that the vendor recommends replacement of a disconnect switch
8 after 1,000 operations but advises that Hydro does not track the
9 operating history of its disconnect switches. Provide an explanation
10 as to why such tracking is not carried out.

11 Project C-44, Refurbish Anchors and Footings

12 **IC-NLH-32** On page 7 of the report filed at Volume II, Tab 19, Hydro states that
13 a detailed environmental assessment will be performed prior to
14 completing the work. Please advise when such environmental
15 assessment will be performed and the anticipated date that Hydro
16 will be in receipt of a report in respect of that assessment.

17 **IC-NLH-33** On page 9 of the report filed at Volume II, Tab 19, Hydro states that
18 the proactive refurbishment and/or replacement of anchors and
19 footings is common among utility companies. Provide support for
20 this statement.

21 **IC-NLH-34** On page 9 of the report filed at Volume II, Tab 19, Hydro states that
22 a visual climbing inspection of each transmission line is performed
23 every ten years to evaluate the condition of the line. The most
24 recent climbing inspections of TL202 and TL205 were in 2010 and
25 2011. If the next climbing inspections are not scheduled until 2020
26 and 2021, is the risk of deteriorated anchors and footings lessened
27 such that the work could be prolonged until closer to those dates?

28 **IC-NLH-35** On page 13 of the report filed at Volume II, Tab 19, the project
29 schedule shows that the refurbishment will take place from Bay
30 d'Espoir to structure number 80 in 2014 and then from structure
31 number 83 to Sunnyside in 2015. Provide a breakdown of how
32 many anchors will be replaced in each year.

33 Project C-48, Upgrade Distribution Systems

34 **IC-NLH-36** On page 5 of the report filed at Volume II, Tab 20, Hydro advises
35 that the line components have been found to be in "B" (one to five
36 years of remaining life) or "C" (less than one year of remaining life)
37 condition. Has Hydro considered replacing only the line
38 components in "C" condition at this time? If not, why not?

1 **IC-NLH-37** On page 12 of the report filed at Volume II, Tab 20, Hydro advises
 2 that blackjack poles are environmentally unacceptable and
 3 references a Department of Environment and Conservation Policy
 4 entitled "Policy for Use of Creosote Treated Wood in and Near
 5 Fresh Water." Please provide a copy of this Policy.

6 **Project C-52, Upgrade Distribution Systems**

7 **IC-NLH-38** Does any of the work in Project C-48 and the ten individual
 8 distribution upgrade projects described therein overlap with this
 9 project? Why or why not?

10 **Project C-56, Replace Diesel Units**

11 **IC-NLH-39** On page 4 of the report filed at Volume II, Tab 21, Hydro states that
 12 the project is justified on the established criteria for reliability to
 13 replace gensets when they approach 100,000 operating hours.
 14 Provide details of the source for this information, as well as
 15 specifics about the risk increase after 100,000 hours (if known).

16 **IC-NLH-40** On page 12 of the report filed at Volume II, Tab 21, Hydro states
 17 that the Port Hope Simpson system is generally more reliable than
 18 other systems in the Northern region, whereas the Mary's Harbour
 19 system is generally less reliable than other systems in that region.
 20 Has Hydro considered replacing the diesel unit at Mary's Harbour in
 21 the 2014-2015 timeframe and scheduling the Port Hope Simpson
 22 unit for a later period?

23 **IC-NLH-41** If the 455kW unit in Port Hope Simpson is replaced with the 725kW
 24 unit as proposed, is it anticipated that the other two 455kW units
 25 will need to be replaced eventually as well, or, given the comment
 26 on page 21 of the report filed at Volume II, Tab 21 wherein Hydro
 27 states that the 725kW unit could support the entire demand of Port
 28 Hope Simpson for approximately 95% of the year, is it anticipated
 29 that this replacement will be sufficient to satisfy demand in that
 30 area?

31 **IC-NLH-42** Provide more details regarding the input factors and calculations for
 32 the CPW values.

33 **Project C-58, Install Fire Protection System**

34 **IC-NLH-43** On page 7 of the report filed at Volume II, Tab 22, Hydro advises
 35 that some of Canada's other major utilities such as Manitoba Hydro
 36 and Hydro One in Ontario make use of fire suppression systems in
 37 their diesel plants.

1 ○ Do these utilities have automatic fire suppression systems in all
2 of their diesel plants or only a percentage?

3 ○ Is it considered the industry norm to install fire suppression
4 systems in diesel plants?

5 **Project C-60, Upgrade Diesel Plant Production Data**

6 **IC-NLH-44** Do other major utilities in Canada collect detailed demand
7 information (including daily load profiles) from remote communities?

8 **IC-NLH-45** Is it necessary to have daily load profiles for remote diesel plants to
9 forecast load growth?

10 **Project C-62, Overhaul Diesel Engines**

11 **IC-NLH-46** On page 2 of the report filed at Volume II, Tab 24, Hydro states that
12 20,000 hours is the criteria used for diesel engine overhauls and
13 was the criteria recommended in 2003 following a comprehensive
14 maintenance review. Provide details regarding that review and
15 development of the overhaul criteria.

16 **IC-NLH-47** Is 20,000 hours on par with industry practice for this type of
17 project?

18 **Project C-64, Additions to Accommodate Load Growth**

19 **IC-NLH-48** On page 4 of the report filed at Volume II, Tab 25, Hydro advises
20 that if the load exceeds the equipment capacity, a power outage
21 may result. On page 9 of the same report, Hydro sets out a table of
22 five-year average outage statistics including average number of
23 power outages and average length of time a customer is without
24 power, including all causes and loss of supply. Does Hydro have
25 further statistics regarding what portion of the loss of supply
26 outages is attributable to load exceeding equipment capacity?

27 **IC-NLH-49** On page 11 of the report filed at Volume II, Tab 24, Hydro states
28 that construction of the new 1,200 square meter multi-purpose
29 facility is expected to start by the spring of 2013. Has construction
30 commenced for this facility? When is the facility expected to open?

31 **IC-NLH-50** Provide details regarding the input factors and calculations for the
32 CPW values.

33

1 Project C-66, Install Automated Meter Reading

2 **IC-NLH-51** On page 1 of the report filed at Volume II, Tab 26, Hydro advises
3 that it has implemented automated meter reading in 14 service
4 areas and in Table 2 provides a list of projects since 2007. Provide
5 details regarding the actual costs per service area, as well as an
6 explanation for the variation in cost per unit.

7 **IC-NLH-52** Provide details regarding the input factors and calculations for the
8 CPW values.

9 Project C-68, Replace Light Duty Mobile Equipment

10 **IC-NLH-53** Provide a complete copy of Hydro's mobile equipment replacement
11 guidelines.

12 Project C-76, Replace Battery Banks and Chargers

13 **IC-NLH-54** Hydro states that the flooded-cell battery has a typical service life of
14 18-20 years and the VRLA battery has a typical service life of 7-10
15 years. What is the source for this information?

16 **IC-NLH-55** Provide a copy of IEE Standards 450 and 1188.

17 **IC-NLH-56** What has been Hydro's operational experience for flooded-cell
18 batteries with in excess of 20 years of service life and for VLRA
19 batteries with in excess of 10 years of service life?

20 **IC-NLH-57** With respect to Table 1 of the report filed at Volume II, Tab 28,
21 provide the following information:

22 ○ Whether the batteries to be replaced at each location are
23 flooded-cell or VLRA;

24 ○ The proposed capital expenditure for each location;

25 ○ The number of batteries at each location which have been
26 tested and found to have a capacity of 80% or less of its rated
27 capacity.

28 Project C-78, Replace Vehicles and Aerial Devices

29 **IC-NLH-58** Provide a copy of the vehicle replacement guidelines.

30 **IC-NLH-59** Provide details regarding average replacement criteria used by
31 other Canadian utilities.

32

1 Project D-2, Upgrade Victoria Control Structure – Bay d’Espoir

2 **IC-NLH-60** At page D-8, Hydro states that as hydraulic structures age the
3 requirement for refurbishment is undertaken by most utilities, and
4 also advises that Churchill Falls Labrador Corporation, whose
5 structure is approximately 40 years old, is presently involved in a
6 rehabilitation program.

7 ○ At what age of the hydraulic structure do “most utilities” in North
8 America commence a major refurbishment of the structure?

9 ○ What utilities has Hydro researched for comparison purposes?

10 Project D-29, Overhaul Turbine/Generator Units – Bay d’Espoir and Hinds Lake

11 **IC-NLH-61** On page D-29, Hydro states that these turbine/generator units are
12 inspected on a six year frequency based on recommendations
13 outlined in Hydro’s Asset Maintenance Strategy (AMS)
14 Management Program. On page D-30, Hydro states that the six
15 year frequency is based on the experience and manufacturer
16 recommendations as described in the Industry Experience section,
17 while the Industry Experience section simply states that work
18 performed during major inspections and overhauls is based on
19 operational experience and manufacturer recommendations.
20 Describe what factors and sources of information were considered
21 in determining that a six year frequency is appropriate.

22 **IC-NLH-62** The total maintenance costs in 2008 for each of Bay d’Espoir and
23 Hinds Lake were relatively low, at \$39,900 and \$35,800
24 respectively. Based on a six year frequency, inspections and major
25 overhauls should have been completed in 2008. Confirm
26 inspections and overhauls were done in 2008 as well as the budget
27 for same.

28 Project D-34, Upgrade Generator Bearings Unit 2 – Bay d’Espoir

29 **IC-NLH-63** What is the difference between the modifications made to Units 1 -
30 6 in the years 1971-1975 which were only partially successful, and
31 the modifications proposed in this project?

32 **IC-NLH-64** Is it expected that the proposed modifications will completely
33 eliminate the oil contamination issue?

34 **IC-NLH-65** What is the status of the 2013 modification work to Unit 4? If
35 complete, has it resolved the issue of oil emissions and leaks for
36 this Unit?

37

Project D-56, Upgrade Public Safety Around Dams and Waterways – Bay d’Espoir

IC-NLH-66 The terms “Public Safety Risk Assessment” and “Public Safety Audit” are both used with respect to the Meelpaeg Reservoir. Clarify whether the Risk Assessment is the same as the Audit or whether there is a difference in these items.

Tab 18, Volume II – Wood Pole Line Management

IC-NLH-67 At pp. 3-4, Hydro refers to Order No. P.U. 4 (2013), and states that Hydro has taken steps to evaluate the correlation of several NDE techniques with full scale testing and will submit a report with its results as part of the 2015 capital budget submission.

- Please outline all the steps that have been taken since P.U. 4 (2013) was issued to evaluate the correlation of several NDE techniques with full scale testing, including the dates those steps were taken, specifically identifying the Hydro and non-Hydro personnel involved in these steps and the nature and extent of their involvement, and the total expenditure made in respect of these steps.

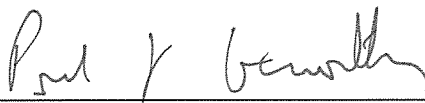

- Why was this report not made ready for submission as part of Hydro’s 2014 capital budget submission?

Project assignment under cost of service

IC-NLH-68 Please indicate, in respect of all projects over \$50,000, whether the proposed capital expenditure is in respect of a common asset or specifically assigned to Newfoundland Power or the Island Industrial Customers in Hydro’s most recent cost of service study.

DATED at St. John’s, in the Province of Newfoundland and Labrador, this 4th day of September, 2013.
