In 2004, Newfoundland Power had 193 passenger vehicles.

In 2005, a workforce reduction occurred at Newfoundland Power due to the Early Retirement Program (the "2005 ERP"). At year-end 2005, Newfoundland Power was able to reduce the passenger vehicle fleet from 193 vehicles to 185 vehicles as a result of the 2005 ERP workforce reduction.

Reductions in the size of the vehicle fleet are limited by operational requirements.

Newfoundland Power's forecast requirement for passenger vehicles for 2008 is 185, which is the same as the passenger fleet requirement at year-end 2005.

Table 2 shows the make, model and year of each sport utility vehicle ("SUV") in Newfoundland Power's fleet of passenger vehicles year to date.

¹ Figure for 2006 includes 7 retired vehicles that were awaiting public auction.
