

1 **Volume 1, Section 2 – Customer Operations**

2

3 **Q. What are NP's plans in respect of energy conservation efforts in the Test Year and**
4 **2009? Please state the goals and targets developed by NP in respect of the same.**

5

6 A. The Company anticipates that future plans with respect to energy conservation efforts
7 will, in large measure, be influenced by the outcomes and recommendations of the
8 Conservation and Demand Management Potential Study (“the Study”) currently being
9 undertaken jointly with Newfoundland and Labrador Hydro.

10

11 See Response to CA-NP-78 regarding the Study.

12

13 Because it is too early in the Study process to make conclusions regarding new program
14 opportunities and costs, the Company has not reflected any costs which may arise out of
15 the Study’s conclusions in the Test Year. Newfoundland Power’s Test Year cost forecast
16 for energy efficiency programs is based on current levels of program participation and
17 costs.

18

19 See Response to CA-NP-76 for Test Year energy efficiency program costs.
