

B-109 System Security Upgrades, \$667,900

Q. What are the general recommendations for security upgrades? Please provide copies of the consultant managed studies.

A. Hydro commissioned three consultant studies on security. These were:

- “Security Inspections, Holyrood Thermal Generating Station’ – Robert Humes, – October 2003.
- “Security Risk Assessment, Hydro Facilities” - Forensic Investigations Canada, Inc. – December 2005.
- “Holyrood Marine Facility Security” – MacDonnell Group Consulting Ltd. – May 2004.

The general recommendations made by the consultants centered around site and facility fencing, closed circuit cameras, security site access systems, filing systems, personnel security clearances, intrusion alarms, etc. Because the consultant’s reports deal with Hydro security issues, they are confidential and cannot be released into the public record. However, Hydro would be willing to provide them to the Board and Counsel for the Intervenors, in confidence.
