

1 Q. Provide details of the similar assessment done at the other utility that formed
2 the basis of the cost estimate as referenced in PUB 11.0 NLH, setting out the
3 EPRI level of assessment conducted on major components.

4

5

6 A. A similar condition assessment study was performed at a Canadian utility on
7 a three-unit plant at a cost of \$2.2 million, not including boilers. Hundreds of
8 systems and pieces of equipment were assessed and Hydro does not have
9 access to details of the level of inspection to which each was subjected.

10

11 An assessment is in progress at another Canadian utility on a single unit. To
12 date all the dismantling, sampling and inspections have been completed
13 including extensive boiler assessment. The projected cost at completion is
14 \$1.5 million.
