

Board Inquiry into Hydro's Recent Supply Issues and Power Outages

Danny Dumaresque's Proposed Issues List

TIMEFRAME: This investigation should review anytime leading up to the Blackouts and continue until after the closure of Holyrood, 2021.

SCOPE: The reliability of the power system in this province now and into the future must be the paramount concern of this investigation. In this respect, Danny Dumaresque proposes that asset readiness, maintenance practises, equipment performance and reliability and system response are the issues.

The transmission of power from Muskrat Falls to Solider's Pond needs to be reviewed.

The submarine cable under the Straits of Belle Isle needs to be reviewed.

The backup system in place today in the event that the MF link fails and Holyrood has been decommissioned must be known.

Any and all issues related to the above would be considered in the scope of the investigation.
